

Odormycin®

The worlds leading autoclave deodorant

- Eliminates offensive odours.
- Economical.
- Choose from five natural fragrances.

Odormycin overcomes those feared 'microbiology lab smells' that result from autoclaving organic waste material. The highly concentrated liquid deodorant is supplied in convenient gelatin capsules which are activated by the heat and moisture within the autoclave cycle, allowing the fragrance to be released. Simply place a single capsule with each load to eliminate those offensive odours, leaving the laboratory smelling fresh, clean and pleasant. Choose from five fragrances- Apple, Heather, Peach, Lemon and New mixed Friuts
