Pipettes

Premium Quality Micropipettes

Pipettes

- **Ultra High Quality**
Rigorously tested by MEA (>80% pass mark) and LAL (<0.5 Eu/ml pass mark)
- **Effective & Sterile**
Wide range of sizes and angles, gamma irradiated
- **Precise**
Super sharp, non-sticky, with consistent geometries

Research Instruments Ltd (RI) has been manufacturing premium quality micropipettes since 1998. Pipettes are manufactured in an ISO 14644 Class 7 cleanroom using close tolerance borosilicate glass with a 1mm OD. Our highly trained technicians have developed our micropipettes in collaboration with experts in IVF. Following each step of production, our micropipettes are individually inspected by our Quality Control staff. Our procedures are such that an ICSI micropipette is examined five times before production is completed. All micropipettes are embryo safety tested on a batch basis using the highest industry pass mark in Mouse Embryo Assay (MEA) – at least 80% of the test embryos must reach the blastocyst stage at day 6. The batches are also certified free of endotoxins by the Limulus Amoebocyte Lysate (LAL) test (<0.5 Eu/ml pass mark). Micropipettes are sterilised by an approved gamma irradiation facility meeting ISO 11137 standards.

RI's unique Twista-Pak™ operates like a lipstick, enabling the easy and damage-free removal of the micropipette from its packaging and is colour coded for immediate visual identification. Each micropipette is sealed in a tamper-proof medical pouch, ensuring its sterility until use. Pipettes have a shelf life of three years.

All Pipettes codes begin 7-71-, followed by the type and angle of pipette, ending with /20, e.g. 7-71-SI20/20. To specify the type, follow the format below:

Standard bend angles 0°, 20°, 25°, 30° & 35°	PIPETTE TYPE	Code	VIEW		Colour
			Top	Side	
	ICSI-Plus™ Spiked Injection Micropipette	SI/			Red
	ICSI-Plus™ Non-Spiked Injection Micropipette	NI/			Blue
	ICSI Holding Micropipette	IH/			Green
	Large Holding Micropipette	LH/			Yellow
	Assisted Hatching/Zona Drilling Micropipette	AH/			Orange
	Blastomere Biopsy Micropipette	BA/ (30µm) BB/ (35µm) BC/ (25µm) BD/ (20µm)			Black
	Mechanical Dissection Micropipette	MD/			Grey
	Polar Body Biopsy Micropipette	PB/			Black
	Testicular Sperm Micropipette	TS/			Red
